

## Aurora AIS-AMSW Network Audio

---

Aurora AIS-AMSW Audio Management System is an audio broadcast software based on IP multicast. It's adopted to be used in LAN and supports auto scan batch setting of Aurora IP Speaker and SIP Paging Adapter. It can play various audio sources from SIP call, live radio, local media player, universal windows media player (for example, Spotify, iTunes, VLC, etc. ) via RTP Multicast. Users can easily set and control zones, contents, rings, volume and scheduling, especially used in school, retail or commercial centers.

- ▶ **Hardware requirements:** PC with windows 10 and above.
- ▶ **Compatible devices:** Aurora SIP Speaker, Aurora Paging Adapter, or other IP Audio Products.
- ▶ **Functions:** Control zones, contents, rings, scheduling, volume. Perfect for a wide range of audio system, for example school, retail, commercial centers, etc.
- ▶ **License:** User need to contact us for license key.

---
